Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This Office Action is taken in response to Examiner's Interview with Applicant dated 23 September 2003. Claims 9-21 were elected for examination in the application.

Election/Restrictions

2. This application contains claims 1-8 and 22-30 drawn to an invention nonelected following an examiner's interview with (J. Rover, Reg. # 51,894). A complete reply to the rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2186

5. Claims 9-13 and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,623,608 (Ng).

With respect to claims 9-10 and 13, Ng teaches a method for memory usage comprising: receiving a data access request; using information about a data access sequence to determine if the data access request refers to part of a frequently occurring data access sequence; and if the data access request refers to part of a frequently occurring data access sequence, placing data from the data access request in a cache memory location [Abstract; Col. 4, Lines 39-59; Col. 6, Lines 33-47].

With respect to claims 11-12, Ng teaches selecting a cache memory address such that a cache conflict with other data accesses of the frequently occurring data access sequence is avoided and placing the data in the selected cache memory address; teaches collocating the data from the data access with other data in memory from the frequently occurring data sequence [Col. Lines 3-20].

With respect to claims 17-21, Ng teaches if the data access request is a request for a frequently occurring data access sequence, retrieving the element and placing the element in a cache memory location such that a cache conflict with a second element in the frequently requested data access sequence is avoided [Col. 6, Lines 3-20].

Allowable Subject Matter

6. Claims 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 6,170,044 (McLaughlin et al) teaching system and method for synchronizing redundant controllers with minimal control disruption.

US 6,098,154 (Lopez-Aguado et al) teaching apparatus and method for generating a stride used to derive a prefetch address.

US 6,098,064 (Pirolli et al) teaching prefetching and caching documents according to probability ranked need list.
